

New! A one-of-a-kind book for transportation professionals

Light Rail Developers' Handbook

Lewis Lesley

This unique book is for anyone interested in how to justify and build light rail systems in the age of green technologies and limited resources. The historical introduction addresses how many of the problems faced by light rail promoters and planners are not new and how existing solutions can be used to save time and money. The planning chapter explains the process of route identification on the basis of travel patterns and maximizing modal switch. The engineering chapter shows the costs of infrastructure, equipping, and commissioning a new light rail system. The economic evaluation chapter shows promoters how each line can be assessed for viability, comparing the capital cost of construction with expected revenue, including sensitivity to different fares, market conditions, and operating costs. In conclusion, the book reviews how to keep a light rail system attractive to riders and investors after opening.

About the Author

Professor Lewis Lesley is a chartered professional engineer and registered professional engineer who does substantial consulting work for major bus operators, local authorities and rail operators throughout the U.K. and the world. He graduated from Kings College London with a BSc in Mathematics and Physics and received his Ph.D. in Transportation Engineering from Strathclyde University. Dr. Lesley has published more than 200 technical papers in refereed international journals and is the author or editor of 25 books.

Retail Price: \$99.95

Special Promotional Price:
\$89.95 when Ordered Direct
 from J. Ross Publishing

Key Features

- Presents solutions to problems faced by light rail developers and planners saving time or costs or both
- Discusses the process of enlisting the involvement and support of the community in a project
- Details the cost structure of equipping and commissioning a new light rail system
- Explains how rail lines can be assessed for financial viability from launch to ongoing operations
- Includes case studies of light rail systems in San Diego, Calgary, Karlsruhe, Nantes, Sheffield, Sydney, and Galway City

Light Rail Developers' Handbook

Catalog no. JR0448, ISBN 13: 978-1-60427-044-8
 2011, 320 pages, 6 x 9, Hardcover

Quantitative methods to access transportation systems

Transportation Statistics

Edited by Brian W. Sloboda

Transportation Statistics brings together the work of outstanding experts on the latest methods and the applications of those methods to the many modes of transportation statistics at the international level. You'll find examples and explanations of the techniques used in transportation modeling such as travel demand, travel demand forecasting, freight analysis, the environment, and much more. This one-of-a-kind, definitive technical reference will equip practitioners, policy-makers, and academic researchers with state-of-the-art statistical tools used in transportation modeling, how to interpret results, and how to analyze the implications of those results.

Key Features

- Presents up-to-date applications of statistical and econometric methods to transportation data rather than statistical theory
- Provides insight into the variety of data collection sources used in statistical analysis
- Draws on the many advances in statistical analysis of transportation data as a result of increasing computing power

Catalog no. JR0082 • ISBN: 978-1-60427-008-2 • 2009
