Acoustics and Audio Technology

THIRD EDITION

Mendel Kleiner

Acoustics and Audio Technology, Third Edition, is an introductory text for students of sound and vibration as well as electrical and electronic engineering, civil and mechanical engineering, computer science, signals and systems, and engineering physics. A fundamental knowledge of basic engineering mathematics and physics is assumed. Problems are included at the end of the chapters and a solutions manual is available to instructors. This completely revised and expanded classroom-tested third edition covers the physical background to and mathematical treatment of: sound propagation, the properties of human hearing, the generation and radiation of sound as well as architectural acoustics, the technologies used for pickup, recording, and reproduction of sound in various environments, and much more.

About the Author

Mendel Kleiner, Ph.D., is currently Professor of Acoustics at Chalmers University of Technology, Gothenburg, Sweden, and in charge of the Chalmers Room Acoustics Group. Dr. Kleiner has more than 50 publications, presented keynote lectures and more than 110 papers, led courses at international conferences on acoustics and noise control, and organized an international conference on acoustics. Dr. Kleiner is a Fellow of the Acoustical Society of America, the Chair for the Audio Engineering Society's Technical Committee on Acoustics and Sound Reinforcement and on its Standards committee on Acoustics.

Worship Space Acoustics is a unique guide to the design, construction, and use of religious facilities for optimum acoustics. The book is divided into two parts: Part 1 discusses methods and techniques of room optimization, including how the acoustics of large and small spaces are designed, implemented, and adjusted; how acoustical privacy is attained; noise and its control; sound reinforcement; and numerical and physical modeling techniques. Part 2 provides the architect, student, and lay person a review of the characteristics of the religious services pertinent to various beliefs and how these are provided for in the acoustic design of spaces in churches, mosques, and synagogues.
